using video streaming
in traditional way**

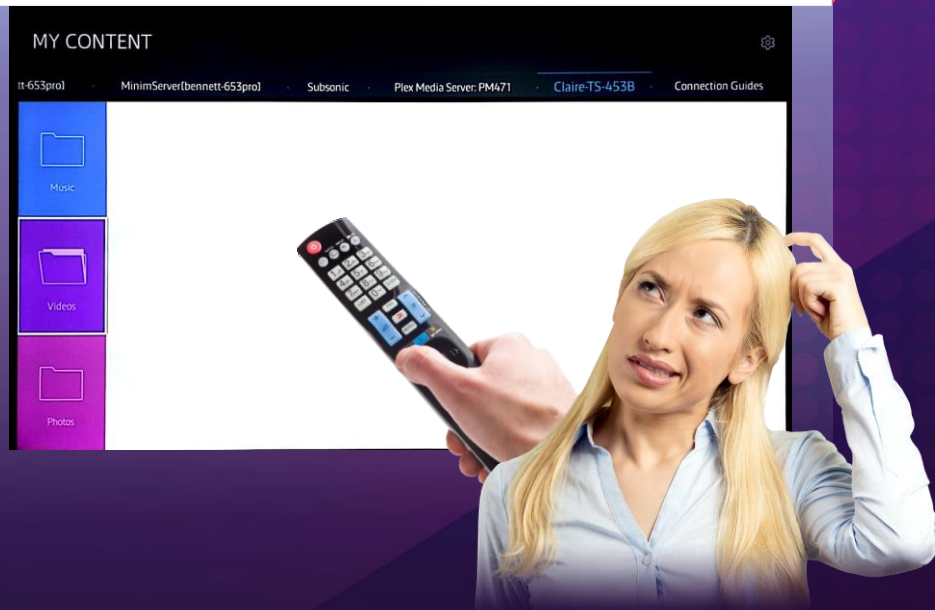

HELP!

Have you ever had trouble with these video streams in the past?

Each streaming device setting interface is different, so it is difficult to use! >

Willing to set up the video streaming device, but the environment is messed up! >

The trouble of traditional video streaming...

- 1 > Cannot clearly grasp the status of devices
- 2 > Device operation management and setting are not easy
- 3 > Likely to cause equipment usage conflict

**Cinema28 brings
whole new solutions**

Cinema28 Multi-Zone Playback

Integrate multiple streaming devices and streaming protocols into a single interface for centralized management, allowing users to easily stream digital multimedia files to audio/video devices in every corner of the house.

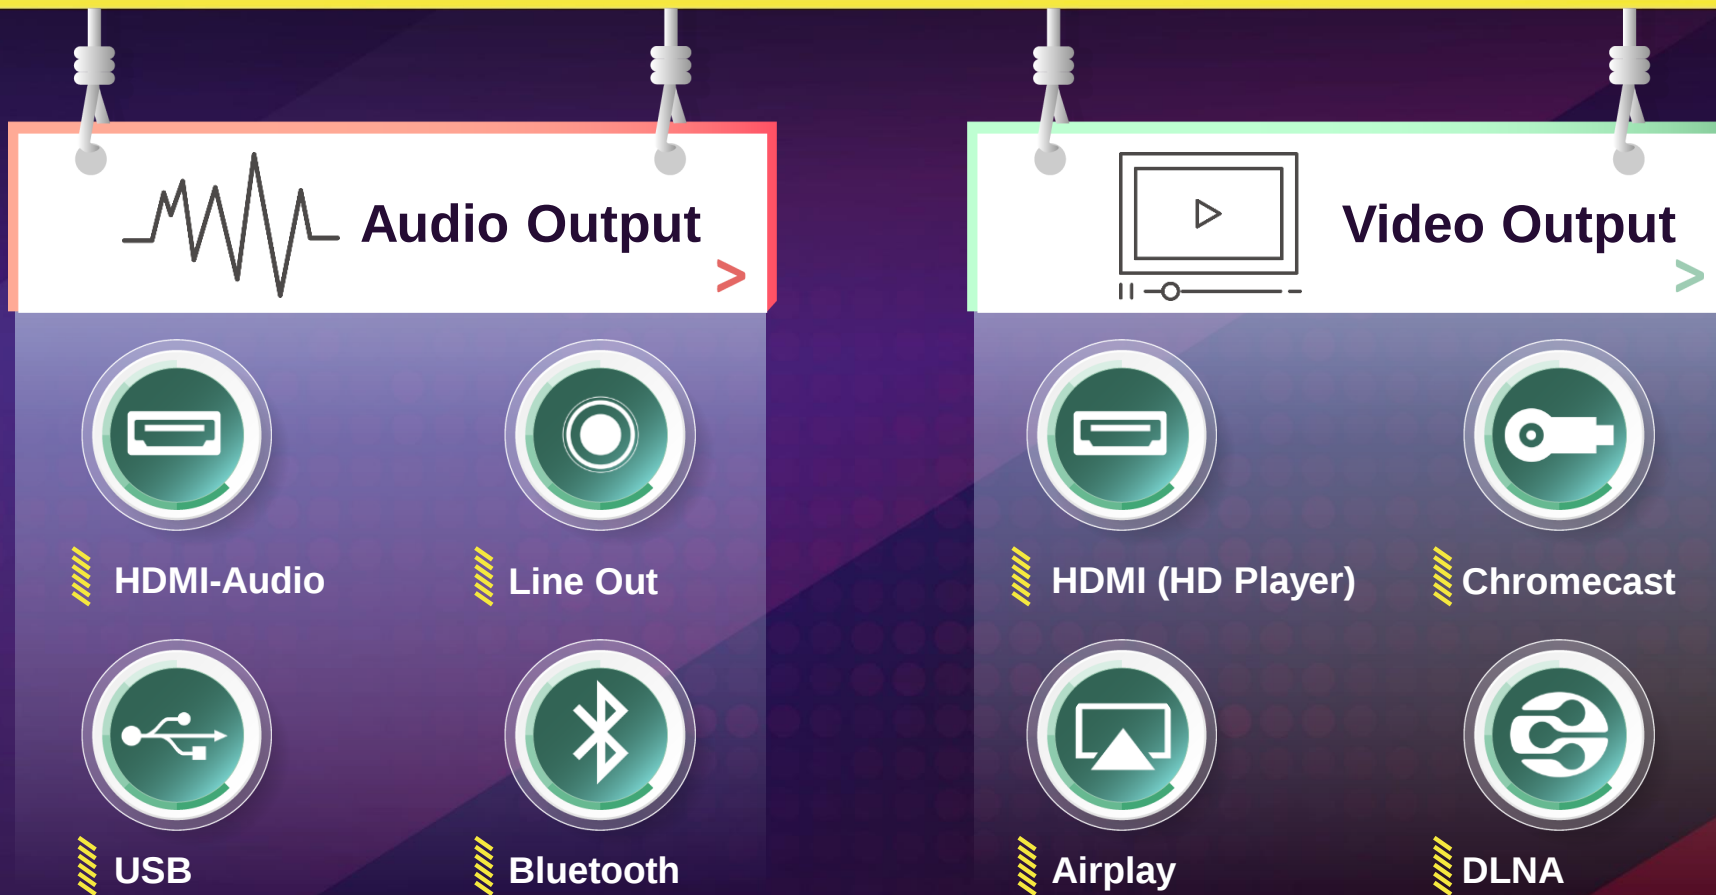

Four Major Features of Cinema28

-  One interface monitors all device states
-  Intuitive stream operation and device setup
-  Supports up to eight types of streaming protocols
-  Complete support for three types of multimedia files

Support for up to eight types of streaming protocols

From the point of view of operating different audio and video devices, Cinema28 aims to enhance your multi-room streaming experience. Cinema28 can also stream files to **eight different streaming protocol devices**.

Support your major mainstream speakers

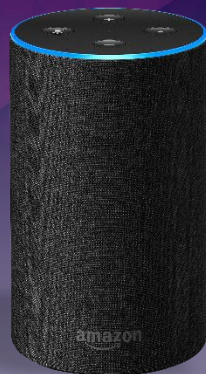

Cinema28 supports major wireless streaming protocols such as Bluetooth, Airplay, and DLNA to stream music to your various audio devices.
